

TIBCO BUSINESSWORKS ON TIBCO SILVER FABRIC

AT A GLANCE

Run BusinessWorks on Your Private Cloud

TIBCO BusinessWorks is powerful enterprise integration technology that enables organizations to expose existing systems as services, build new services, and orchestrate and assemble services into applications – with little or no coding. Deployed by over 1,000 companies world-wide, BusinessWorks provides vital infrastructure for some of the most mission-critical service-oriented business environments in production today.

TIBCO Silver Fabric is a platform for creating a private cloud in your own data center that allows you to automate the provisioning and deployment of critical business applications, such as BusinessWorks, increasing your organization's efficiency and reducing the risk of critical systems failures.

KEY FEATURES

- Support for diverse BusinessWorks topologies and use cases
- Automated deployment and provisioning via a private cloud self-service portal
- Dynamically scale running BusinessWorks services

BENEFITS

- Significantly shorten BusinessWorks set-up and deployment times
- Radically reduce costs of running BusinessWorks environments
- Exceed service levels for large-scale integration services

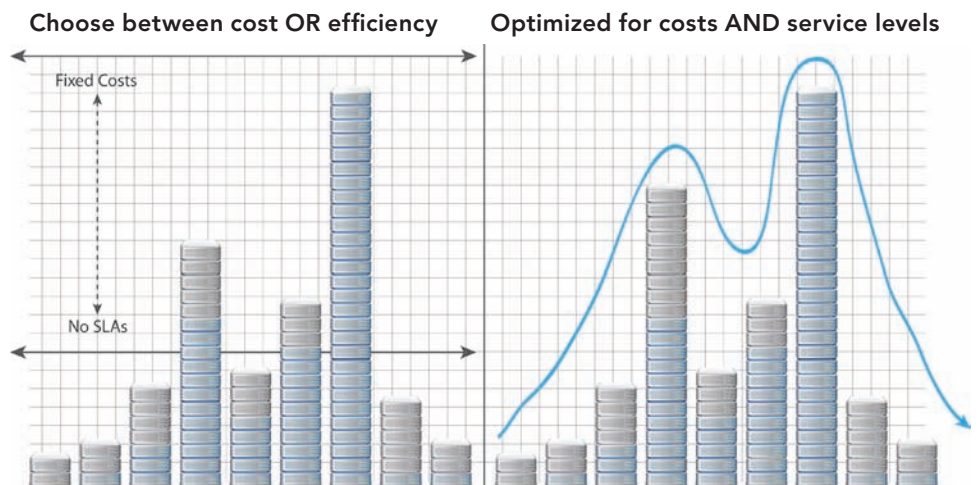

DIFFERENTIATORS

- Integration with existing data center infrastructure
- Run-Time Optimization

Cloud computing is being touted as the “next generation of computing” and is seen as vital to many in the IT industry. The many benefits of migrating to a cloud computing model include: increased efficiencies through shared resources, greater flexibility, global accessibility, and reduced expenses compared to standard physical computing. These benefits are offset by a few shortcomings, including loss of control and increased security risk, to name a few.

Manage Your Business, Not Your Environment

TIBCO believes organizations shouldn't have to choose between efficiency and security. TIBCO Silver® Fabric allows you to setup a private cloud within your existing environment. This private cloud offers the same benefits as the public cloud without the additional risk. TIBCO's solution comes with additional benefits not seen in public cloud offerings, such as automated dynamic scaling and run-time optimization – intelligent features that enable TIBCO's software to manage your environment, so you can manage your business.

ATTRIBUTES & CAPABILITIES

Run-Time Optimization

TIBCO Silver Fabric allows you to utilize your resources to the fullest by automatically scaling your environment to meet changing demand. When planning resources for the year, a typical CIO has two choices: optimize for cost and risk not having resources during peak consumption, or optimize for efficiency and have idle resources during nonpeak demand. TIBCO Silver Fabric allows you to optimize your resource allocation through run-time optimization. Unlike standard virtualization systems, TIBCO Silver Fabric allows you to set rules based on the franchise application you install, not only the physical process of the machine.

Self-Service Portal

Let your users bring up their own systems without IT intervention. TIBCO Silver Fabric's self-service portal allows IT managers to configure enterprise-wide permissions, ensuring that users only access systems and configurations within corporate standards. TIBCO Silver Fabric is able to integrate with standard corporate identity store (AD/LDAP), so you can structure users based on your organizational hierarchy. Task-based workflows are generated based on the specific business rules implemented by cloud administrators, allowing users to request permission to act outside of the standard template.

- Role-based entitlements and permissions
- Simple task-based workflows
- Application life-cycle support

BusinessWorks Support

Easily provision new TIBCO BusinessWorks™ instances using TIBCO Silver Fabric's built-in container. Significantly reduce your TIBCO BusinessWorks install times utilizing TIBCO Silver Fabric's BusinessWorks enablement. Create your existing package once and run it anywhere within your organization. TIBCO Silver Fabric supports:

- Custom application stacks
- Popular open-source application support
- Legacy app platforms support
- TIBCO Enterprise 3.0 Applications

Private Cloud Optimization

Automatically scale your BusinessWorks environments based on real-time metrics you can customize to your organization's requirements. TIBCO Silver Fabric is able to monitor demand-side metrics (users, load, latency, etc.) along with supply-side metrics (utilization, capacity, performance, etc.) in order to offer you the flexibility to create business-specific rules. Optimize your private cloud based off SLAs, expenses, revenue, or any business priority.

- Demand and supply decision support metrics
- Demand-driven optimization
- Run-time enforcement

Plug & Play Datacenter Infrastructure Integration

TIBCO Silver Fabric is able to support your existing infrastructure investment, whether that is physical servers, virtual servers, or third-party cloud infrastructures.

- Datacenter automation tools
- Server virtualization
- Enterprise app infrastructure
- IAAS integration

About TIBCO

TIBCO Software Inc. (NASDAQ: TIBX) is a provider of infrastructure software for companies to use on-premise or as part of cloud computing environments. Whether it's efficient claims or trade processing, cross-selling products based on real-time customer behavior, or averting a crisis before it happens, TIBCO provides companies the two-second advantage™ - the ability to capture the right information, at the right time and act on it preemptively for a competitive advantage. More than 4,000 customers worldwide rely on TIBCO to manage information, decisions, processes, and applications in real time. Learn more at www.tibco.com.
