

TIBCO's Solution for Universal Application Network

As a leading enabler of real-time business, TIBCO provides software that helps companies increase revenues, reduce operating costs and improve their customer relationships by connecting and coordinating their assets and activities. For many years, TIBCO's solutions have enabled Siebel Systems' customers to integrate their customer information and orchestrate their customer-centric activities across enterprise-wide applications, resulting in a more complete view of the customer.

Developed by Siebel Systems, the Universal Application Network (UAN) is a standards-based application integration framework that delivers templates for business processes and connections between applications. TIBCO's solution for UAN, based on TIBCO BusinessWorks™, enables Siebel Systems' customers to rapidly integrate and orchestrate business processes across people and applications so they can realize UAN's promise to reduce the time and cost of implementing and maintaining integration projects.

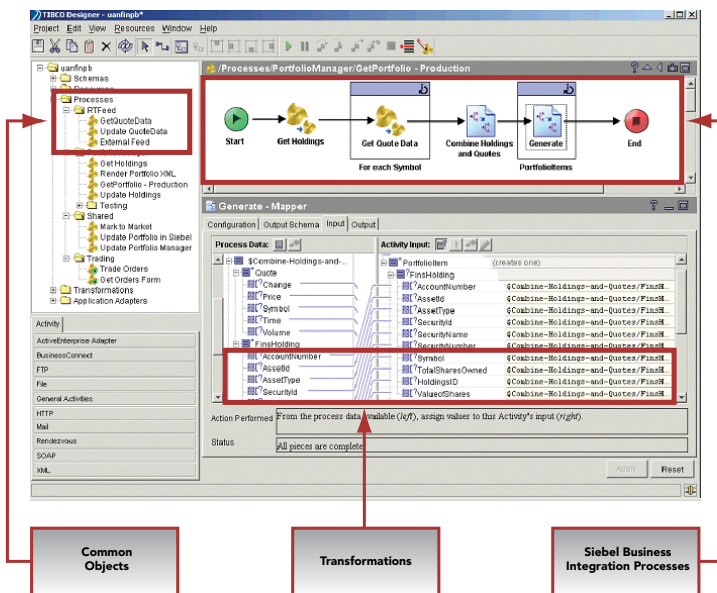

Using TIBCO's solution for UAN projects enables customers to deploy UAN-based processes more quickly, with less effort and with less risk.

AT A GLANCE

TIBCO's solution for UAN enables Siebel customers to integrate and orchestrate people-intensive business processes with applications across the enterprise.

BENEFITS

- Reduce risk of UAN deployments through compatibility with the entire library of UAN process flows, transformation maps and business objects.
- Improve operational efficiency with workflow capabilities such as dynamic routing to connect enterprise applications and coordinate routine activities.
- Improve decision-making by enabling a bi-directional flow of data between business management and system monitoring tools, proactively alerting the right people about exceptional events so they can mitigate or eliminate impact on business performance.

TIBCO's proven business integration technology provides the ideal platform for UAN initiatives.

ATTRIBUTES & CAPABILITIES

TIBCO BusinessWorks™ software provides a standards-based platform for rapidly developing, deploying and continuously improving UAN processes. Coupled with other TIBCO software, TIBCO BusinessWorks provides a foundation on which companies can build a service-oriented architecture.

Workflow Capabilities

With workflow capabilities such as dynamic routing, companies can connect enterprise applications and coordinate routine activities, greatly improving the speed and efficiency of their operations. Companies can also leverage these capabilities to more quickly adapt their operations to threats, opportunities and changing conditions.

Complete Standards Support

With the ability to integrate legacy systems with .NET, Java EE, XML and other standards, TIBCO BusinessWorks gives customers the ability to not only leverage all of their existing assets, but to choose the technology that makes the most sense for their business going forward. Additional supported standards include XSD, XSLT, SOAP, WSDL and BPEL.

Unified Configuration and Deployment of UAN Processes

Unlike some solutions, TIBCO BusinessWorks features a single interface for designing, deploying and managing UAN projects. This accelerates deployment, reduces staff training requirements and reduces implementation costs.

Automated Deployment

TIBCO BusinessWorks features an automated deployment capability so customers can implement changes to UAN processes across distributed networks in less time and with less IT resources than would otherwise be required.

"Using TIBCO BusinessWorks with UAN radically simplified our deployments. UAN's common object model helped the developers significantly, allowing them to accelerate time-to-market."

*– Michael Ryan, Manager of Systems Integration,
Network Appliance*

Real-Time Information

Dashboards display information about key performance metrics as they change, enabling decision-makers to respond more quickly to threats and opportunities.

Reliability and Scalability

With features such as guaranteed messaging, distributed rule bases, dynamic load balancing and fault tolerance and distributed queuing, TIBCO BusinessWorks provides the reliability and scalability that TIBCO solutions are known for. This ensures that all UAN processes stay up and running with minimal effort, enabling customers to scale their activity as business requirements change or increase.

"Because TIBCO is our integration platform standard, our UAN initiative was greatly simplified."

– Andrea Lavazzi, CIO, Eni S.p.A.

TIBCO Software Inc. (NASDAQ: TIBX) is a leading independent business integration software company and a leading enabler of real-time business, helping companies become more cost-effective, more agile and more efficient. TIBCO has delivered the value of real-time business, what TIBCO calls The Power of Now®, to thousands of customers around the world and in a wide variety of industries.
